PCB Remediation Status Update - Behlen Roof.pdf;

Hi Kurt,

On behalf of the University of Nebraska and as a follow-up to EPA comments on the roof modification submittal, please find attached a summary report documenting the current status of PCB remediation activities associated with the parapet wall flashing joints on the roof of the Behlen Laboratory. Currently the roof replacement activities are anticipated to be conducted in the first or second quarter of 2016.

If you have any questions or require additional information please let me know.

Thanks

Jeff
